Profile

Entry-level Data Scientist specializing in machine learning and data analytics. Experienced in building end-to-end predictive models, performing EDA, feature engineering, and NLP classification, and translating data into actionable insights. Strong foundation in statistical modeling, business-focused analysis, and reproducible workflows, with hands-on projects achieving up to 92% model accuracy. Eager to apply data-driven skills in a technology-driven mobility environment.

Skills

- Programming Languages: Python (Pandas, NumPy, scikit-learn), SQL, C++
- Machine Learning & AI: Regression, Classification, Clustering, NLP (TF-IDF, Text Classification), Generative AI Foundations
- Cloud Computing: AWS AI/ML Services, Azure AI Fundamentals
- Data Engineering: Big Data Processing (PySpark), ETL Basics, Data Pipelines
- Visualization & Tools: Matplotlib, Streamlit, Excel, Git & GitHub
- Soft Skills: Leadership, Data Storytelling, Communication, Team Collaboration, Time Management

Professional Experience

Machine Learning Trainee – NTI (June 2025 – August 2025)

- Built end-to-end ML pipelines (data cleaning, feature engineering, training, evaluation) improving model accuracy by 12%
- Applied cross-validation & hyperparameter tuning using scikit-learn.
- Designed automated evaluation dashboards with Streamlit, reducing manual reporting by 30%.

Data Analysis Trainee – Creativa (April 2025 – May 2025)

- Analyzed 10K+ records using SQL.
- Optimized queries improving execution speed by 20%.

Participant – NASA Space Apps Challenge 2025 October 2025 | Hackathon Event (Team Cassiopeia)

- Developed an AI-based solution for the “Data Pathway Healthy Cities” challenge.
- Applied data visualization to extract 5+ actionable insights for improving urban health.
- Enhanced teamwork and time management under real-world hackathon conditions.

Projects

- Fake News Detection: NLP pipeline using TF-IDF + Logistic Regression (92% accuracy)
- Cover Type Classification: Random Forest & XGBoost (87% accuracy)
- Student Performance Prediction App: Streamlit ML app (90% accuracy)
- Iris Classification: Multiple ML models (95% accuracy)
- Fruit Freshness Detection: Fine-tuned ResNet50 for dual-task fruit analysis: Fresh/Rotten classification & days-to-spoilage regression. Tech: Python, PyTorch, CNN.
- Autonomous Obstacle-Avoiding Robot Car: Arduino-based robot with ultrasonic sensing and servo scanning for real-time obstacle avoidance. Tech: Arduino, C++, Embedded Systems.

Education

Bachelor’s Degree in Artificial Intelligence – Menofia University (2023 – 2027)

Certificates

- Machine Learning Training (120 Hours) – National Telecommunication Institute (NTI) | August 2025
- Data Analysis Bootcamp: Master Data Science Skills – Udemy | June 2025
- Azure: AI Fundamentals – Manara | September 2025
- Python Programming Basics – Mahara-Tech (Information Technology Institute - ITI) | August 2025
- Data Analysis Using SQL Training (35 Hours) – AMIT & ITIDA
- Supervised Machine Learning: Regression and Classification – DeepLearning.AI & Stanford University (Coursera)
- Next Scholar Program Participant – ScholarX | October 2025
- AWS AI Practitioner Challenge – Udacity (In Collaboration with AWS) | *In Progress - 56% Completed*
- McKinsey.Org Forward Program – McKinsey & Company | *Ongoing Development*

Languages

- Arabic – Native
- English – Proficient (written & spoken)
